EDUCATION

• Kalinga Institute Of Industrial Technology, Bhubaneswar

Bachelor Of Technology In Information Technology

2020-24

CGPA: 8.3

EXPERIENCE

• CSG International

December 2024 - Present

Software Engineer Grad

Bengaluru

- Contributed to building **CSG's internal Product Catalogue platform**, aimed at centralizing product & service metadata for teams across the organization.
- Developed and integrated a full **backend feature** using **Node.js** by building controller, model, service, and route from scratch, enabling seamless **RestAPI flow** and improving backend modularity.
- Engineered a **UI feature** with **React** to support dynamic field rendering, input validation, file uploads to **S3**, and robust form submission, streamlining product data entry.
- Automated static content rendering for the About page by integrating **S3-stored JSON**, eliminating manual updates and cutting content maintenance time by **70%**.
- Implemented **Announcement** functionality in the catalogue page UI, enabling **100%** visibility of key updates to users via a dedicated navbar component.
- Integrated **AWS services (S3, DynamoDB)** to handle image uploads, metadata storage, and user activity tracking, enhancing the platform's interactivity and observability.
- Configured **Jenkins CI/CD pipeline** via **Azure DevOps** to automate code deployment to the dev environment.

• CSG International

February 2024 - December 2024

SDE Intern

Bengaluru

- Spearheaded the development of billing processes, designed **APIs** and optimized the **codebase**, reducing redundancy by **30%**.
- Developed multiple **Java** backend functions improving the fetching of rating and billing charges by **25%**, and wrote **Unit test scripts** to ensure enhanced functionality.
- Utilized **EPM, Java, SQL, Linux** and **Angular** to deliver robust software solutions.

PERSONAL PROJECTS

• Indoor Crowd Management System

Technologies used - **HTML, CSS, Javascript, Python, Flask, OpenCV, YOLO**

- Built a real-time crowd management system using **YOLO Object Detection** and **Flask** to monitor and count individuals in indoor spaces.
- Developed a **web interface** with visual alerts for immediate crowd control actions based on density thresholds.
- Utilized **Python, OpenCV**, and **Flask** to enhance public safety and optimize crowd control.

• Cryptonaut

Technologies used - **HTML, CSS, Javascript, ReactJs, CoinGecko API**

- Engineered a **Web Application** that empowers users to delve into the intricacies of various cryptocurrencies.
- Users can engage with dynamic charts to vividly visualize cryptocurrency data.

• Brain Tumor Detection

Technologies used - **Machine Learning, Python, StreamLit**

- Engineered a **Machine Learning Model** that accurately identifies the presence of tumors in MRI scans.
- The model utilizes **CNN** and uses robust frameworks such as **TensorFlow, Pandas**, and **Matplotlib** for performance.
- Developed an interactive front-end using **StreamLit & Python** streamlining user interactions.
- The model holds an accuracy of **80%**.

TECHNICAL SKILLS AND INTERESTS

Languages : C++, Java, Python, HTML, SQL, JavaScript

Domains : Data Structures & Algorithms, Object Oriented Programming, Big Data, GenAI, DBMS

Frameworks & Tools : NodeJs, ReactJs, Bruno, Git, Grafana, Jenkins, REST APIs

Cloud & Database : Docker, Kubernetes, AWS, PostgreSQL

ACCOMPLISHMENTS

- **Leetcode** - **350+** Leetcode problems solved, highlighting proficiency in algorithmic challenges.
- **GeeksForGeeks** - **60+** GFG problems successfully tackled.
- **Certification** - AWS Cloud Practitioner Essentials
